

## For Immediate Release

Date: 10th November, 2009

Foncordiax today confirmed they would be incorporating the B600 analog voice card from Sangoma into the Foncordiax SMB model as part of the companies new product range.

Foncordiax have spent the last 4 months revising and modifying their range of high quality, eco friendly and robust IP PBX phone systems which are due for official launch next week. The SMB model sits right in the middle of the range giving 4 FXO (analog line connections) and 1 FXS (appliance connection) using Sangoma's premium audio and world renowned hardware.

Mark Trowbridge, CEO of Foncordiax said: "Sangoma are a first class company with exceptional products and support and given we have been striving to launch the 'Rolls Royce' of PBX's, it has never been in doubt that we would ultimately utilise Sangoma cards across the range."

All Foncordiax systems come with a fantastic array of features and functionality, warranties and support and are now available in an affordable 'Plug n Phone' configuration, allowing customers to be making calls within minutes of unpacking and connecting the control unit and handsets.

The range of systems has been thoroughly researched and carefully designed to cover the entire business spectrum from Soho (small office home office) through busy offices to business centres and corporations. The complete Foncordiax range of systems are currently manufactured and assembled in three continents and sold via a global distribution network with 24/7 support available when required.
